**WULTURES**  
Wultures are scavengers that feed on the remains of dead animals. They have a powerful sense of smell and can find food from miles away. They are also very strong and can carry large pieces of meat.

**ARTHROPODS**  
 The arthropods includes the majority of the known species of animals, the individuals of many of the species being numerically very abundant. It includes the crabs, shrimps, lobsters, insects, spiders, scorpions, ticks, mites, millipedes and centipedes. Arthropods are very widely distributed and occur at all altitudes on mountains even as high as 20,000 feet and in the ocean depths as far deep as 10,000 feet. The body of the typical arthropod is bilaterally symmetrical and segmented externally with paired appendages.
